

Crown Chakra Song

Githa Ben-David May 2026

Sa re gha ma pa dha ni sa
ni dha pa ma gha re sa ni

1) Is the dorian scale similar to the
colors constellation
intervals of sound
fractals snaking round

2) When the white light breaks into a
crystal
or through drops of water
rainbows can appear
and easily disappear
again

Chorus:
We sing colors we sing white light
We sing frequencies that can shine
bright
We are colors we are white light
We are frequencies that can shine
bright

3) Are we humans water crystals
bending white light into colors
moving back and forth
overtones can cross
barriers of time

4) Fibonacci's sequence is reflected
by the pineals' vortex
infinite rejoice
created through your voice

Chorus:
We sing colors we sing white light
We sing frequencies that can shine bright
We are colors we are white light
We are frequencies that can shine bright

5) Light reflections serve a higher
purpose
and the violet color
opens up our third eye
to see

6) that all life is a reflecting
mirror bending an illusion
time is timeless truth
and so are we

Chorus:
We sing colors we sing white light
We sing frequencies that can shine
bright
We are colors we are white light
We are frequencies that can shine
bright
